

Smoking and Heat Source Risk

This letter is to notify you how to safely use home oxygen and inform you of MedPro policy regarding smoking with oxygen and using the oxygen around heat sources.

Please select the risks that apply:

☒ **SMOKING RISK**

Smoking while using oxygen poses a significant safety risk to you and those around you. You should never smoke while using oxygen therapy or in proximity to the oxygen equipment. Please ensure all your equipment is turned off and stowed away, you remove your cannula or mask and refrain from smoking in the same room or within 10 feet of your equipment. You need to have been off the oxygen for a minimum of 5 minutes prior to smoking. Any damage to MedPro-owned equipment caused by smoking will be at your responsibility (whether by fire or exposure to smoke and nicotine in the air).

If you are witnessed smoking while using oxygen or near your equipment, we will discontinue your home oxygen therapy to ensure your safety, and the safety of others. This policy applies even if you are not the person smoking near the oxygen, as you are responsible to ensure that smoking is not permitted in the same room as your oxygen equipment.

We strongly recommend you take the following preventative actions:

- 1) Review hazards of smoking on oxygen
- 2) Enroll in a smoking cessation program, if you have not yet completed one
- 3) Restrict and Cease smoking in the presence of oxygen immediately

☐ **OPEN FLAME / HEAT SOURCE RISK**

Using oxygen near open flames or heat sources (i.e. candles, gas stove, space heaters or fireplaces) poses a significant risk to you and those around you. You need to ensure your oxygen equipment and tubing are kept a minimum of 10 feet away from open flames or heat sources. Any damage to MedPro-owned equipment caused by fire or exposure to smoke / soot in the air will be at your responsibility.

MedPro-owned equipment should never be operated within 10 foot of a heat source or environments where the equipment is exposed to contaminated air from a fireplace / stove.

Failure to comply with this safety warning will result in discontinuation of oxygen therapy service by MedPro Respiratory Care. Your physician and funding body, if applicable, will be notified of our intent. You are responsible for any replacement or repair costs for MedPro-owned equipment due to smoking or heat source related damages.

Should service be discontinued, MedPro Respiratory Care will not re-initiate therapy without a thorough review.
